

Sioux Equipment for your Precast Operation

WATER HEATING SYSTEM

For over 20 years, the Sioux PWP Series Water Heaters have been the standard system for use in precast, pipe, vault, pre-stress or block operations where hot water is needed on a continuous basis.

The PWP-1000 System includes a one million BTU/H water heater, a 225 gallon mild steel water tank (stainless option available), and a pumping station all on one skid. The pumping station consists of two pumps—one to circulate water through the heater and one to discharge water from the system to the mixers.

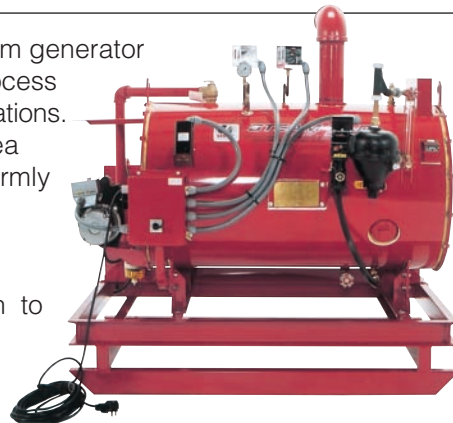

Features include liquid level sensors with water solenoid valve, liquid level sight gauge, adjustable tank temperature control and thermometer. Comes complete with motorized draft diverter/damper. The entire system is mounted on a rugged steel skid for portability. Choose from oil, LP, natural gas firings or the optional oil/gas dual fuel burner.

All Sioux Steam Cleaner Corporation units are built to ASME code and are National Board Registered. Installation, operation and maintenance are simple and the PWP provides reliable, trouble-free service.

STEAM-FLO® SPEEDS UP CURING

The Sioux Steam-Flo is a portable steam generator that is ideal for accelerating the curing process in precast, pipe, prestress and block operations.

The Steam-Flo saturates the curing area with steam at 100% humidity, which uniformly heats the concrete and accelerates the curing process. Accelerated curing can increase output from each form per day. This will increase and improve production to meet contract requirements without increasing the size of the facility or the number of forms. Due to its portability, the

Steam-Flo is also ideal for use in overflow production and outlying areas; it is also an excellent unit for thawing and de-icing aggregates.

The Steam-Flo is manufactured and labeled according to ASME Code and registered with the National Board. Quality workmanship, simple operation, and reliable, trouble-free service have made Sioux Steam Cleaner Corporation the leader in building portable steam generators for 50 years.

CONVENTIONAL STEAM CLEANERS AND PRESSURE WASHERS FOR GENERAL MAINTENANCE

Sioux also manufactures a line of rugged and dependable steam cleaners and pressure washers ideal for cleaning production machinery and plant equipment. These models rapidly dissolve grease, oil, dirt and grime and are excellent for cleaning buildings and vehicles as well as general facilities and grounds maintenance.

Sioux hot pressure washers are available as self-contained units with an integrated pressure washer and either a gasoline or diesel engine. Mounting options for these units include either a heavy-duty skid or over-the-road trailer, which is

excellent for cleaning at remote locations or where there is no water or power source available. Sioux steam cleaners heat the water to 320°F and it is then released through a low pressure nozzle flashing to steam at 212°F, providing the highest temperature performance in the industry. Pressure washers clean using water heated to 200°F. Combination units are also available which provide steam cleaning, hot pressure washing and cold pressure rinse in one compact unit.

APPLICATIONS

	STEAM CLEANER	HOT PRESSURE WASHER	COLD PRESSURE WASHER	COMBINATION STEAM & HOT PRESSURE
Degrease engine blocks, motors & fans	X			X
Wash concrete & debris from concrete forms, mixers & plant equipment		X	X	X
Clean conveyors, walkways, floors, walls & ceilings		X	X	X
Clean & degrease parts, tools & equipment	X			X
De-Ice frozen valves, roofs, culverts, pipes & equipment	X			X
Wash radiators, machinery & scaffolding	X	X		X

"X" Indicates the best unit for each application. Combination units are ideal for all applications.

Sioux is the industry leader in custom, application-specific designs. A wide range of options are available, including 50 Hz electricals, custom frames, water tanks, trailers, and other accessories to provide the EXACT equipment you need.
